WHERE DE LUXE CHESTS ARE MADE

OUR HOME AT DUBUQUE, IOWA

Ours is a Quality House. Quality has ever been our watchword. In designing the chests in this catalog, Quality and Style have been given our very first consideration. Every design is simple and well proportioned, and will appeal to the good taste of the most fastidious customer.

Our tremendous facilities give us the advantage of production. Quantity buying power, large warehouses and most modern machinery create a combination, permitting us to produce and sell the finest chests, for the same, or less, than you pay for an ordinary nailed-together chest.

We know that once you sell our De Luxe Line, you will not be satisfied with any other. Let us prove our claims. A trial order is the best way to do this.

Every De Luxe Chest you sell in your community will be a favorable and lasting advertisement for you.

FARLEY & LOETSCHER MFG. CO., DUBUQUE, IOWA, U. S. A.

OUR GUARANTEE

We guarantee every De Luxe Chest to be the very finest quality, perfect in construction and finish, and exactly as described. We are not infallible, and should any chests prove defective, we are not only willing, but anxious that you shall return them to us at our expense. We are not satisfied unless you are.

THE CLOTHES-MOTH

There is no difficulty in housekeeping so hard to overcome as the deadly work accomplished by Moths—cutting holes in valuable garments, day and night, winter and summer. Continual watchfulness is necessary to prevent the destruction wrought by these tiny pests.

This illustration shows adults and well grown larvae of the clothes moth about two-thirds their full size. It is only the larvae or worms that damage fabrics.

THE LIFE CYCLE OF THE MOTH

Dr. Frank Raback of the U. S. Department of Agriculture, stated, "You all know the Moth as it flies around in the rooms. This is known as the adult moth. The moth is looking for a place to lay its eggs. It usually takes a dark place, that is why it generally chooses a dark closet in which to do it; it lays from three to fifteen eggs a day, for perhaps five or six days. After laying these eggs it dies.

The eggs are deposited on the cloth, and in warm weather they hatch out in the course of two or three days and produce small larvae or worms. These worms are the insects which do the damage; they begin feeding and continue to feed until they weave a cocoon about themselves. Normally they assume their full growth in about five or six weeks time.

Then they spin this cocoon, all the while feeding vigorously on the cloth, or fur, or whatever it happens to be in the box or closet in which they are. After they have spun this cocoon about themselves, they remain in that stage for about a week, after which time they again emerge and are the moth—completing the cycle."

MITRE LOCK CORNER

BLIND DOVE - TAIL

A CEDAR CHEST IS THE WEAPON TO USE AGAINST MOTHS!

As it is the young worm or larvae, which damages the clothes, an efficient weapon must be used to destroy them. They are too small and too numerous to attempt to crush as you would other pests. **They must be killed by wholesale and killed at once upon being born.**

It has been thought for years that red cedar chests were effective against the moth, and a few experiments were made, but none were complete and convincing until in 1921, when Dr. E. A. Back, entomologist in charge of Stored Product Insect Investigations, Bureau of Entomology, and Dr. Frank Rabak, Chemical Biologist of the U. S. Government, completed very extensive tests and established the fact that the odor of the Volatile Oil in Red Cedar Chests is deadly to young larvae or worms, and the cedar chest has been proven without question of doubt, to be a safe receptacle for the protection of clothing against the ravages of these insects.

EXTRACT FROM GOVERNMENT BULLETIN

"Chests made of heartwood of red cedar, such as are found on the market, if in good condition as regards tightness, are effective in protecting fabrics from clothes-moth attacks if certain precautions are taken to beat, brush, and, when possible, sun articles before placing them in the chest. The writers experimented with chests from the time of manufacture until they were one year old, and believe that chests will retain indefinitely their value as protectors against moth ravages provided they are cared for properly."

CONSTRUCTION OF "DE LUXE" CEDAR CHESTS

GENERAL—

In making the "De Luxe" chests special attention is given to correct lines and proportions with a view towards modesty in design and freedom from all unnecessary dust catching ornamentations. This simplicity gives emphasis to their beautiful, rich appearance. These chests are absolutely moth-proof, vermin-proof and dust-proof.

WORKMANSHIP—

"De Luxe" Chests are the product of skilled cabinet-makers, genuine mechanics of the old school, to whom perfection has become a habit. Every chest is accorded the same individual care to make it a genuine piece of art.

LUMBER—

Solid Red Cedar Chests are made throughout from $\frac{7}{8}$ inch Genuine Aromatic Tennessee Red Cedar selected for color.

DRYING—

All material is properly seasoned in our modern kilns.

CORNER JOINTS—

All corner joints have our special blind dove-tailed mitred lock joints, well glued. It is physically impossible to open, and completely conceals the unsightly end-grain wood. No nailing is necessary.

Our Mitred, Blind, Dove-Tail Corner
Construction and Glue Joint

Patent Applied For
(Illustration About Half Size)

TOPS AND FRONTS—

Attention is particularly given to the selection of beautiful figured pieces for fronts and tops.

FARLEY & LOETSCHER MFG. CO., DUBUQUE, IOWA, U. S. A.

**BOTTOMS—**

The bottoms are made in the form of panels which fit into grooves in the front and sides, and are held in place by a rabbet in the back. This is the strongest possible bottom and allows for the natural contraction and expansion of the wood.

LIDS—

All Lids are tight-fitting and have either an overlapping inside or outside mould, which makes them absolutely dust-proof.

Cross Section Showing Our Special Glue Joint
(Illustration About Half Size)

GLUE JOINTS—

Practically all cedar lumber comes in narrow widths. The little which can be procured in wide widths usually must be cut up to eliminate defects. To

make the wide tops, sides, ends and bottoms it is necessary to glue a number of narrow pieces together. Our special double-tongued and grooved joint increases the gluing surface and binds the two pieces very firmly together. This is a decided improvement over the usual method of making two smooth edges and gluing them together.

FINISH—

All "De Luxe" Solid Red Cedar Chests are carefully sanded and finished with the best varnish in the natural red cedar color, rubbed throughout to a beautiful soft dull finish.

COPPER TRIM—

Only genuine solid copper is used for trimming "De Luxe" Chests. The copper is given a satin finish and lacquered to resist tarnishing. The Trimmings are studded with large-headed coppered nails, which further enhance the beauty of the copper trim.

HARDWARE—

Each Chest is equipped with easy-rolling casters or metal glides, according to the construction of the legs; substantial locks with coppered keys. The lid stays and hinges are of bright polished coppered metal. When wood handles are not specified, we use coppered metal handles.

CRATING—

Every "De Luxe" Chest is carefully crated for shipment. Every care is taken so that each chest is properly protected from scratches, marring, etc., so that it should reach its destination in perfect condition.

DIRECTIONS FOR PROTECTING YOUR CLOTHES FROM MOTHS

CLOTHES PLACED IN A CEDAR CHEST ARE SAFE

Recent tests conducted by the United States Government proved that the volatile oil in Red Cedar destroys the young moth worm, which is the villain that does the damage to clothes.

BRUSH CLOTHES THOROUGHLY BEFORE STORING

As the three-quarter or full-grown larvae are not always killed by the fumes of Cedar Oil, it is necessary to brush that cloth and that fur—brush it thoroughly and air it. Air and sunlight are enemies of moths. But brushing, no matter how thorough it may be, sometimes does not rid the cloth of the small larvae or eggs, because the eggs are laid as a rule, in the nap of the cloth. The adult moths do not lay eggs on the surface—some are underneath, so that it is very difficult indeed to brush all the eggs out. These eggs will hatch, of course, but the oil in cedar will kill the young larvae immediately, so there is no danger whatever of destruction in the chest.

CONDENSING OF THE OIL INSIDE CHEST

If the oil should condense inside the chest it can be removed very quickly when necessary by wiping off with a cloth dipped in gasoline. As an extra precaution the chest could be lined with heavy, clean wrapping paper or wax paper.

KEEP LID CLOSED WHEN NOT IN USE

This is very important. If the lid of the chest is left open for any length of time the cedar aroma escapes and lessens the effectiveness of the chest against the moth's invasions. Close the lid immediately after using.

CONCLUSION

Impress upon your customers the advisability of purchasing one of our perfectly-constructed genuine Tennessee Red Cedar Chests before he has suffered a loss from the ravages of moths or larvae.

De Luxe Cedar Chests are economical and safe investments.

SUGGESTIONS

A De Luxe Cedar Chest is recognized as a staple article of furniture. There is no other individual item in the home as useful or beautiful. It is suitable and within reach of all classes of people, rich or poor, old or young; for all occasions, such as:

**For the Layette
That New Baby
Birthday Presents
For the Hope Chest
Graduation Presents
Wedding Presents
An Anniversary Gift
A Remembrance
For Mother
His Sweetheart
Spring Storing of Clothes
Fall Storing of Clothes
Christmas Presents
New Years' Gifts**

There is a proper De Luxe design for each of the above occasions, and every chest will satisfy the taste of the most fastidious. There is always a satisfaction in receiving the best that is produced and equally as satisfying in the selling.

FOR WINDOW DISPLAYS

A Cedar Chest window display will attract as much if not more attention than any display you can use.

Also, place a chest at the foot of the bed when showing a bed room scene. It takes up little room and adds much to the window.

DEALERS! HERE IS SOMETHING THAT IS MAKING A BIG HIT WITH THE BOYS

ALMOST EVERY SCHOOL HAS A MANUAL TRAINING DEPARTMENT.
GET THEM INTERESTED

The Manual Training
(Knocked Down)

Our "Manual Training" is a K. D. solid Cedar Chest for men and boys who prefer to make their own chest. The above illustrates the material for the "Manual Training," as we ship it, ready to be assembled to make the complete chest shown below. The front, back and ends are machined with our special end lock joint shown on page 6, and are ready to slip together. The balance of the material is unfitted, but is glued up to the proper widths, and sanded smooth, ready for finishing. We also include all necessary hardware, as shown. All material is "in the white," carefully crated for shipping.

The Manual Training
(Completed, Ready to Use)

This shows how the "Manual Training" will look when completely assembled and finished. This also shows a design of copper on the corners which we can supply if wanted, but order must so state. These Chests can also be furnished inlaid like designs on page 10, in which case the inlay is glued in place and sanded smooth.

Put one of these Chests on display. You will be surprised how fast they sell. WE WILL SUPPLY YOU FREE WITH CUTS LIKE THIS TO SEND TO YOUR LOCAL SCHOOLS. WRITE US FOR SOME.

BLIND DOVE - TAIL

DE LUXE PERIOD CHESTS

DESIGN 511

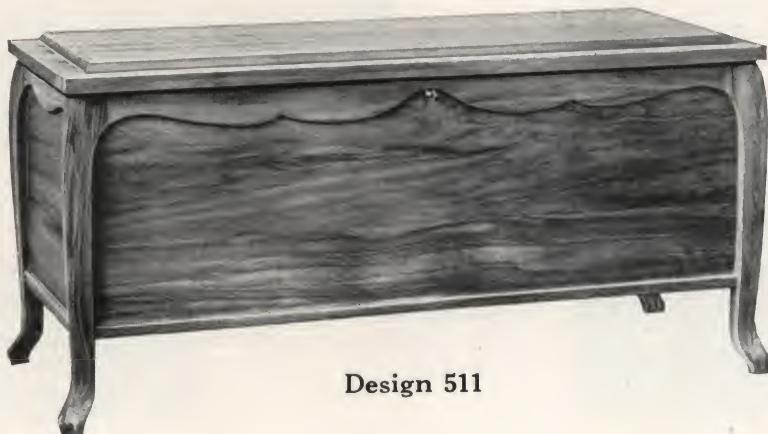

This design embodies the characteristics of the Queen Anne Period. Its gracefully curved legs are in pleasing contrast with the straight lines of the body and give the impression of added height. Its large and roomy interior provides ample storage for many purposes. Used in the hall, it makes a convenient place for keeping auto robes, furs, etc. Made of solid selected figured Red Gum. Bottom and back are all solid Red Cedar, $\frac{7}{8}$ inch thick, which fills the chest with that rich, fragrant aroma to give it the essential property of being moth-proof. Fitted with large sliding cedar tray. Good lock, coppered hinges, lid stays, and metal gliders. Finished standard walnut finish. Rubbed throughout to a fine dull polish. Well crated for shipment.

DIMENSIONS

Size Over All—48 inches long, $22\frac{1}{4}$ inches wide, $22\frac{3}{4}$ inches high.

Shipping Weight—About 130 pounds.

MITRE LOCK CORNER

BLIND DOVE-TAIL

DE LUXE PERIOD CHESTS

DESIGN 521

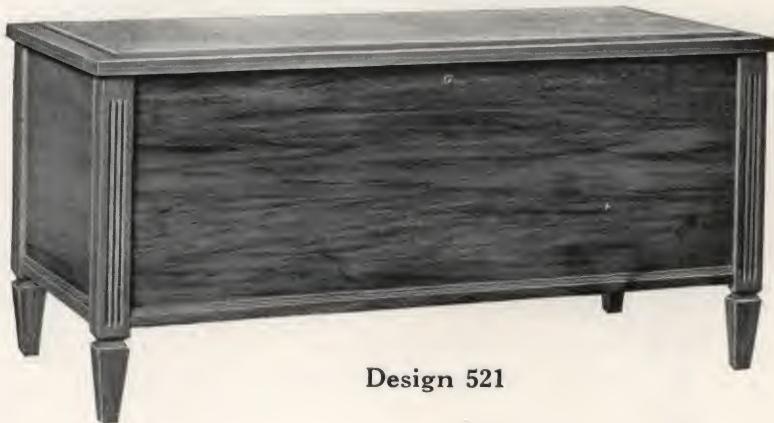

To those who appreciate the plain straight lines of the Adam Period, this design will especially appeal. The fluting on the legs is the only ornamentation and is just enough to set it off nicely. The wide expanse of unbroken front affords excellent display of the beautiful texture of the wood. Made of solid selected figured Gum. Bottoms and backs are solid Red Cedar, $\frac{1}{8}$ inch thick. This gives a rich, fragrant aroma essential to make the chest moth-proof. Fitted with large cedar tray. Good lock, coppered hinges, lid stays and metal gliders. Finished Walnut (dark brown). Rubbed throughout to a fine dull polish. Well crated for shipment.

DIMENSIONS

Size Over All—48 inches long, $21\frac{1}{2}$ inches wide, $22\frac{3}{4}$ inches high.

Shipping Weight—About 125 pounds.

DE LUXE PERIOD CHESTS

DESIGNS 530 AND 532

This design is especially adapted for the dining-room for storing linens, etc., or in the living room for general storage purposes of numerous miscellaneous items. Made of genuine Mahogany or figured American Walnut. The frame is solid, the top and panels are 5-ply with selected veneers. Most substantial construction possible, with sturdy legs and dust-proof lid. Bottoms and backs are solid Red Cedar, $\frac{1}{8}$ inch thick and sides and front are cedar lined, which gives the chest that rich, fragrant aroma essential in making it moth-proof. Fitted with large sliding cedar tray. Good lock, coppered hinges, lid stays and gliders. Finished standard Mahogany and standard Walnut, rubbed throughout to a fine dull polish. Well crated for shipment.

DIMENSIONS

DE LUXE PERIOD CHESTS

DESIGN 551

A chest of the Adam Period which is not only commodious, but which has rare character of design. A little more elaborate than Design 521 and, to some, more desirable. The unique paneled effect is obtained by cutting a shallow groove into the wood. This is an excellent piece of furniture for almost any room. Strongly constructed with dust-proof lid. Made of solid figured Red Gum. Bottom and back is solid Cedar, $\frac{7}{8}$ inch thick, which fills the chest with a rich, fragrant aroma, giving it moth-proof qualities. Fitted with large sliding tray, good lock, coppered hinges and lid stays, and metal gliders. Finished dark brown Walnut. Rubbed throughout to a fine dull polish. Well crated for shipment.

DIMENSIONS

DE LUXE PERIOD CHESTS

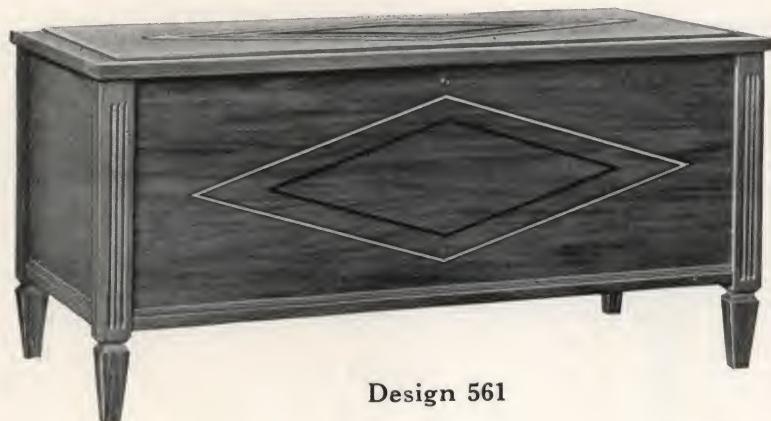

DESIGN 561

Many people consider inlaying as the most beautiful form of ornamentation, and we agree with them. This delightful Adam Period design is inlaid on both front and top with genuine black and white wood inlay. This makes it a distinctive piece of furniture, but still in harmony with other Adam furniture. The very substantial construction and dust-proof lid insure its usefulness for generations. Made of solid figured Red Gum. Bottom and back is solid Red Cedar, $\frac{1}{8}$ inch thick, which fills the chest with that rich, fragrant aroma, giving it moth-proof properties. Fitted with large sliding tray, good lock, coppered hinges and lid stays, and metal gliders. Finished Walnut (dark brown). Rubbed throughout to a fine dull polish. Well crated for shipment.

BLIND DOVE-TAIL

CEDAR CLOSETS

Red Cedar can be used for clothes closets, linen closets, wardrobes, etc. If a cedar closet is desired, the following instructions should be followed if any degree of security from the moth is to be hoped for.

A complete and substantial sub-lining should be put in the closet. Do not overlook the floor.

Place genuine Tennessee Red Cedar over the solid sub-lining, making the walls, ceiling and floor air-tight.

Care should be taken so there is not an open space around the door.

A good lock should be supplied and care taken to keep door locked at all times.

In other words, a cedar closet should be firmly constructed so as to keep the fumes of the cedar oil on the inside.

For further information see United States Department of Agriculture Bulletin No. 1051.

We can furnish red cedar for lining closets, etc., right out of stock, cut to any size wanted. Give us a list of the pieces needed, stating length, width and thickness, and submit rough sketch of the closet or wardrobe with measurements marked plainly, and we will advise you at once how much the material is worth.

Quotations gladly given for odd chests, odd pieces of cedar furniture, etc.

We solicit your inquiries.

Remember we furnish only the genuine Moth-repelling Tennessee Red Cedar.

This attractive illustration is suitable for a two-column or three-column advertisement and will be furnished exact size as above.

Samples of Corner Joint

—Free

Seeing is believing, and if you will show your customer one of these small sections of our mitred blind dove-tail corner joint, you can convince him of its superiority and readily make a sale. Let him test it himself and see how strong and rigid the joint is; also the absence of nails and unsightly end-grain wood. These samples also show our double-tongued glue joint, as in illustration, where boards are glued together. This joint gives greater gluing surfaces and practically eliminates the possibility of joint opening up. These samples are all "in-the-white," and each one shows our mitered blind dove-tail lock corner and one double-tongued glue joint, just as they are made on all of our De Luxe Solid Red Cedar Chests. We will send you a few of these samples free.

A Corner Joint Sample slightly reduced from full size.

This illustration furnished two columns wide only. The small panel at bottom can be lengthened to accommodate copy. Matrix only will be supplied.

No. 7

This illustration furnished three columns wide only. The heading can be raised and the panel thus increased to accommodate copy up to a full page in length. Matrix only will be supplied.

FARLEY & LOETSCHER MFG. CO., DUBUQUE, IOWA, U. S. A.

HISTORY AND USES OF RED CEDAR

The commercial application of the wood, dates back to the 17th century.

In 1632 Morton, in citing the trees that are found in New England, stated:

"Cedar of this sorte there is abundance; and this wood was such as Solomon used for the building of that glorious Temple of Jerusalem . . . This wood cuts red and is good for bedsteads, tables and chests and may be placed in the catalogue of commodities."

In 1682 Gent, in describing the resources of South Carolina, mentioned the presence in that state of odoriferous and fragrant woods, among them being the sweet scented cedar and cypress, from both of which were made boxes, chests, tables and cabinets. He further stated that:

"The dust and shavings of Cedar laid amongst linen and woolen destroys the moth and all verminous insects. It never rots, breeding no worms by which other woods are consumed and destroyed."

In 1748, Peter Kalm, in a report of his early travels in North America, mentioned Red Cedar as being prized for its durability.

In 1776, Evelyn stated that the timber was very valuable for many uses and possessed a bitter resin which prevented worms from attacking it.

In 1786, Lamarck stated that the wood was much sought in America for carpentry, construction of vessels, woodwork and different utensils, because it was filled with a bitter resin which prevented its destruction by worms. According to Bigelow in 1820, "the wood is principally employed for fence posts in which capacity it is more desirable than almost any other species of wood for the same purpose."

In 1829 and later in 1836 and 1866, London mentioned Juniperus Virginiana as producing lumber "which is very odoriferous and useful for cabinet making as it is offensive to most insects."

In 1838 he stated that on account of its strength and durability the barriers of the sidewalks of the streets of Philadelphia were made of this wood, which is also used for making tubs, stop-cocks and coffins."

HISTORY AND USES OF RED CEDAR—(Continued)

In 1869, Porcher made the statement that cedar boxes are not infested by insects, moths, etc., and that they are used for storing away woolens. The leaves also prevent attacks of insects when spread over cloth.

In 1875, further reference to the use of red cedar against insects was made by Emerson, to the effect that the agreeable and permanent odor of the wood recommends it for certain uses, as pencils, bottoms of boxes and drawers, the aroma making it a safeguard against insects.

Similarly it was stated by Curtis, that boxes and cabinets made of Red Cedar wood were exempt from insects on account of its odor being offensive to them.

According to Kent, the wood is highly resistant to decay by water and is therefore, valuable for fence posts and other purposes where it comes into contact with soil and water. This author also stated that moths flee from the pungent odor, and that a chest lined with red cedar wood affords an efficient protection against their inroads.

Within the last 15 years red cedar lumber has been used in constantly increasing quantities in the manufacture of cedar chests. All of the heartwood and part of the white sapwood is utilized for this purpose. The industry has grown at a very rapid rate and at the present time Red Cedar Chests are recognized as a stable article of furniture. These chests combine ornamental beauty with utility as receptacles for the storage of clothing. Their beautiful and attractive appearance is due to the striations of red and sapwood interspersed with the deeper colored circular or oval knots. By means of the firm construction, the extremely tight fitting cover, and the heavily varnished exterior the odor of the wood is successfully retained within the chest. In this connection it may be of interest to state that during a recent pilgrimage to "The Hermitage," the plantation of Andrew Jackson near Nashville, Tenn., in the heart of the red cedar belt, there was found a hand-made cedar chest which was well over a hundred years old. It is reported that this chest retains the full aroma of the cedar, and doubtless from the standpoint of odor still retains its original efficiency."

SERVICE DE LUXE

Shipments, unless otherwise directed, will be forwarded at once by freight.

We carry a complete stock of all sizes at all times.

If you receive an order for some size you do not have in stock, we will be glad to forward direct to your customer.

Send us your inquiries.

We will help you collect your claims for damage and shortage or collect them for you, giving you **full credit**, providing you do not give Railroad Company clear receipt for shipment or pay freight bills until you are sure you have received every item in good condition. In case of shortage or damage be sure to have agent note same on freight bill.

Loss and Damage claims must be made in writing to the Railroads before **four months** have elapsed after making shipments or Railroad Company will not pay them. This is a ruling made by the Interstate Commerce Commission and therefore, in case you wish **us** to handle your **claims**, which **we will gladly do**, the expense bill and other necessary papers must positively be sent to us at least **four months** after shipment has been made, or we cannot handle them for you.

Never return any goods to us without first writing us regarding shipping instructions.

AN INVITATION

We will be pleased to have you visit Dubuque and thoroughly inspect our plant, which is the largest and most modern factory of its kind in the world.
